By Mark Masterson <i>M. sp.</i> UG 1370 from Cerro de la Vibora, Michoacan	42

Cover illustration by Helmut Rogozinski

M. herrerae is one of the most charismatic *Mammillaria* species. It is becoming increasingly scarce in habitat. The situation and possible remedies are highlighted in this issue in the first of two articles by E.S. Martinez et al. which we have been permitted to reproduce from *Arbeitskreises für Mammillarienfreunde* and we thank Wolfgang Plein and Helmut Rogozinski for provision of the accompanying photographs.
